Business Insights & Recommendations

Key Business Findings

- Electronics generated the highest revenue among all product categories.
- Customers aged 46–55 contributed the highest overall sales.
- Male and female customers contributed almost equally to total revenue.
- Sales remained consistent throughout the year with a few peak months.
- The average order value was approximately 456 per transaction.

Recommendations

- Increase inventory for Electronics to meet customer demand.
- Introduce targeted promotions for customers aged 46–55.
- Offer discounts during lower-performing months to improve sales.
- Promote Clothing and Beauty products through bundle offers.
- Continue monitoring customer purchase trends using interactive dashboards.

Project Summary

This dashboard was developed using **Power BI**, **Power Query**, and **DAX** to analyze retail sales performance and customer purchasing behavior.

The report provides interactive filtering by **Product Category**, **Gender**, **Age Group**, and **Date**, enabling users to explore sales trends and customer insights dynamically.

This dashboard can support business decision-making by helping identify high-performing products, customer segments, and sales trends.
